

With the only honor of house Arnold from Breslau in 1900's, the fourth generation, prof.dr.Sebastian Arnold, decide to restart the family industry as known as 'A'rchs in tooling using history. According to cooperate with the experienced vendor from China, 'a'rchs is on the way back to great again.

Polyimide film

Introduction:

Aerchs Polyimide film has wide range of thickness from 12um to 125um according to customers' requirement.

Features:

Excellent heat resistance ,excellent chemical stability ,radiation resistance, solvent resistance and easy for die-cutting.

Application:

Suitable for electronic circuit board wave soldering masking, electrical insulation and high-end finger protection, motor insulation, as well as lithium battery positive and negative and ears fixed. Now it is widely used in aviation, marine, spacecraft, missiles, rockets, atomic energy, electrical and electronic industry and other fields.

Model	Thickness (mm)	Adhesive	Backing	Color	Release Liner	Elongation at break (%)	Insulation strength (MV/m)	Surface resistivity (Ω/inch²)	Short-term temperature (°C)	Long-term temperature (°C)

Single Side Polyimide Tape

Introduction:

Polyimide tape,use polyimide film as a substrate, coated on high-performance silicone pressure-sensitive adhesive.

Features:

Excellent shear resistance, excellent heat resistance ,excellent chemical stability ,radiation resistance, solvent resistance and easy for die-cutting.

Application:

Suitable for electronic circuit board wave soldering masking, electrical insulation and high-end finger protection, motor insulation, as well as lithium battery positive and negative and ears fixed. Now it is widely used in aviation, marine, spacecraft, missiles, rockets, atomic energy, electrical and electronic industry and other fields.

Double sided Polyimide tape

Introduction:

Polyimide tape use polyimide film as a substrate, coated on double side high-performance silicone pressure-sensitive adhesive.

Features:

Excellent shear resistance, excellent heat resistance ,excellent chemical stability ,radiation resistance, solvent resistance and easy for die-cutting.

Application:

Suitable for electronic circuit board wave soldering masking, electrical insulation and high-end finger protection, motor insulation, as well as lithium battery positive and negative and ears fixed. Now it is widely used in aviation, marine, spacecraft, missiles, rockets, atomic energy, electrical and electronic industry and other fields.

High temperarure PET tape

Introduction:
High temperature PET tape uses polyester film as substrate and coated on silicone pressure-sensitive adhesive .

Features:
Strong adhesion ,high temperature resistance ,solvent resistance, corrosion resistance,anti acid, easily peel off without any residue.

Application:
Suitable for Anodizing. Electronic Assembly General Purpose Masking Masking Electronic Components Powder Coating. Plating Photo Splicing. Shipping and Packaging Plasma spray

Teflon Film Tape

Introduction:
Teflon film tape is consist of suspension PTFE resin by moulding, sintering, cooling into blank, then cutting and rolling into film.

Features:
Excellent dielectric properties ,ageing-resistance, corrosion resistance, High lubrication and best chemical corrosion resistance.

Application:
Widely used on various dielectric substrate seal and lubrication materials ,electrical insulating parts ,capacitor dielectric , conductor insulation , electrical instrumentation insulation ,etc.

Model	Thickness (mm)	Adhesive	Backing	Color	Release Liner	Tensile Stength (MPA)	Elongation at break (%)	MHZ Dielectric constant Value	Short-term temperature (°C)	Long-term temperature (°C)

PTFE Fiber Glass Tape

Introduction:
PTFE fiber glass tape use glass fiber fabric as substrate, coated with Teflon emulsion dried glass fiber cloth, then coated with a high temperature silicone adhesive.

Features:
Good smooth surface, non stick and chemical resistance , high temperature resistance and insulating properties, it's reusable and easy to replace

Application:
Widely used in packaging ,heat moulding ,laminating ,laminating, sealing and electrical industries etc.

Model	Total/Backing Thickness (mm)	Adhesive	Backing	Color	Peel Adhesion to Steel (N/25MM)	Tensile Strength (N/10MM)	Voltage Resistance (KV)	Surface resistance (Ω)	Insulation Resistance	Short/Long-term temperature (°C)

Thermal Conductive Tape

Introduction:

Thermally conductive tape use fiber glass cloth as substrate and coated with high-performance acrylic pressure sensitive adhesive.

Features:

Excellent thermal conductivity ,tearing resistance ,break-down resistance and easy die-cutting.

Application:

Mainly apply on CPU, LED,PPR heat sink, microprocessor.And power consumption semiconductor. Replacing screws, fasteners and other fixed means. Fixing heat sink on the power supply circuit board, vehicle control circuit board and packaged chips.

Aluminum Foil Tape

Introduction:

Aluminum Foil Tapes uses various thickness soft aluminum foil as substrate coated on acrylic adhesive and combined with easy-release liner.

Features:

Good electrical conductivity and shielding performance , heat resistance and strong adhesion.

Application:

Mainly apply on air pipe wrapping, refrigerator of factory main raw material. Mobile phones, computer magnetic shielding place and construction industry

Model	Total-Thickness (mm)	Aluminum foil Thickness (mm)	Adhesive	Peel Adhesion (N/25MM)	Initial TackJ.DOW Method No.#	Holding power 1kg/25mm/h	Voltage Resistance (kv)	Short-term temperature (°C)	Long-term temperature (°C)

Mylar Aluminum Foil Tape

Introduction:

Mylar Aluminum Foil Tapes uses Aluminum foil and PET as substrate coated with acrylic adhesive and combined with easy-release liner.

Features:

Good electrical conductivity and shielding performance , heat resistance and strong adhesion.

Application:

Mainly apply on air pipe wrapping, refrigerator of factory main raw material. Mobile phones, computer magnetic shielding place and construction industry

Model	Total-Thickness (mm)	Aluminum foil Thickness (mm)	Adhesive	Initial TackJ.DOW Method No.#	Peel Adhesion (N/25MM)	Initial Tack	Holding power 1kg/25mm/h	Short-term temperature (°C)	Long-term temperature (°C)

Double Conductive Foil Tape

Introduction:
Uses AL/PET as substrate then double side coated on conductive adhesive and combined with easy-release liner

Features:
Good electrical conductivity and shielding performance , heat resistance and strong adhesion.

Application:
Mainly apply on air pipe wrapping, refrigerator of factory main raw material. Mobile phones, computer magnetic shielding place and construction industry

Model	Total-Thickness (mm)	Aluminum foil Thickness (mm)	Adhesive	Peel Adhesion (N/25mm)	Initial Tack (PSTC-6/#14m)M	Electrical Resistance (ohm/inch^2)	Holding power 1kg/25mm/h	Short/Long-term temperature (°C)

Coper Foil Tape

Introduction:
Copper foil tape uses copper foil as substrate and coated with conductive acrylic adhesive.It can be divided into: self-adhesive copper foil, double conductive copper foil tape ,single conductive copper foil tape.

Features:
High temperature resistance ,strong adhesion ,good conductivity ,excellent shielding performance and easy die-cutting.

Application:
Mainly apply on all types of transformers, mobile phones, computers, PDA, PDP, LCD monitors, notebook computers, copiers and other electronic products where electromagnetic EMI shielding is demanded.

Model	Backing	Total-Thickness (mm)	Copper foil Thickness (mm)	Peel Adhesion (N/mm)	Surface Resistance (Ω)	Holding power 1kg/25mm/h	Short-term temperature (°C)	Long-term temperature (°C)

Conductive Cloth Tape

Introduction:
The tape uses conductive cloth as backing then coated with high performance electrically conductive pressure acrylic adhesive and combined with easily peeled off release liner.

Features:
Good heat-resistance ,shear strength resistance, excellent conductivity and good shielding performance.

Application:
Mainly apply on computers, mobile phones, wires, cables and other electrical and electronic products, which need high-frequency electromagnetic wave transmission, infinite shielding or isolation of interference.

Model	Total-Thickness (mm)	Backing Thickness (mm)	Adhesive	Peel Adhesion (N/mm)	Resistance (Ω)	Color	Holding power 1kg/25mm/h	Short-term temperature (°C)	Long-term temperature (°C)

Acrylic Foam Tape

Introduction:
Acrylic adhesive tape is based on complete acrylic acid as substrate and laminated with paper/film as release liner.

Features:
Strong adhesive force, excellent shock absorption properties and anti-cracking, high temperature resistance, anti-solvent, anti-plasticizer and good sealing.

Application:
Widely used in automotive interior parts, Auto trim, auto glass, auto pedal, seals, surfers, round arc, block flow, plate brake light, home appliances, decoration, curtain wall structural adhesive fixing.

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	180° Peel Strength (N/25mm)	Tensile strength (N/10MM)	Short-term temperature (°C)	Long-term temperature (°C)

PE Foam Tape

Introduction:
PE foam tape uses PE foam as substrate and coated with a strong sticky acrylic adhesive on both sides.

Features:
Strong adhesive force, waterproof performance, high temperature resistance, anti-UV ability features.

Application:
* Applied in furniture decorate strips, photo frame
* For sealing electronic components and electronic machine, stuffing
* For bonding automobile reaview mirror, medical equipment parts
* To fix the frame of LCD and FPC
* To bond metal and plastic badge
* Other special product bonding solutions

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	Initial Tack /N	Holding power 1kg/25mm/h	Short-term temperature (°C)	Long-term temperature (°C)

AHS-72300	3	Acrylic	PE foam	Green/Black/White	PE film/Paper	≥25	≥25	149	80

PET Double Side Tape

Introduction:
Use PET film as substrate, double-sided coated with acrylic pressure sensitive adhesive.

Features:
High temperature, solvent resistant, stable and reliable With plastic or paper liner. Very high bonding. Suitable for almost all surfaces mounting. Strong tensile strength

Application:
Nameplate and membrane switches mounting and fixing
Earphone gasket mounting, camera lens fixing, electrical wire fixing
Microphone dust protection net fixing *PCB fixing, LCD frame fixing
LCD gasket mounting *Battery gasket fixing, battery shell fixing
.

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	180° Peel Strength (N/25mm)	Short-term temperature (°C)	Long-term temperature (°C)

AHS-5120	0.2	Acrylic	PET	Translucent/Black	paper	25	140	80

PVC Double Side Tape

ntroduction:
PVC double side tape uses PVC film as the substrate, two-sided coated with acrylic pressure sensitive adhesive.

Features:
Equivalent to Tesa 4970,High initial tack, strong adhesion ,Irregular surface application for its great conformability, Good durability

Application:
Applied to join plastic parts of vehicle ,general decoration and stabilizing , attached electronic parts , glass, nameplate and Etc. Also suitable for sticking metal and plastic.

Model	Thickness (mm)	Adhesive	Backing	Liner	180° Peel Strength N/20MM	Elongation at break (%)	Short-term temperature (°C)	Long-term temperature (°C)
AHS-5224	0.24	Acrylic	PVC	paper	25	35-50	130	80

AHS-5233	0.33	Acrylic	PVC	paper	33	35-50	130	80

Tissue Double Side Tape

Introduction:

Double sided tissue tape uses tissue as substrate and double side coated with solvent based acrylic adhesive.

Features:

Good heat resistance, durability, waterproof performance, good elasticity anti-vibration, excellent flexibility and easy to tear, it has a strong viscosity with PP, PC, OPP, PE, EVA, PORON, sponge, metal, etc.

Application:

Shoe and leather industry,furniture, membrane switch, nameplates signs adhesion
Suitable for adhesion of cars, mobile phones, computers and other electrical components. Sponge, rubber, signs, nameplates, printing, toys and gifts industry and other applications.

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	Adhesion to Steel (N/25mm)	Holding power 1kg/25mm/h	Short-term temperature (℃)	Long-term temperature (℃)

AHS-5315	0.15	Acrylic	tissue	White	paper	≥20	10	120	75

Transier Double Side Tape

Introduction:

Coating with acrylic pressure sensitive adhesive on the release paper (film) material.

Features:

Equivalent to 3M 467 acrylic adhesive. Long Term Heat shielding 80℃. Good conformability excellent shear strength. Acrylic adhesive anti acid and alkali.

Application:

Digital product part permanent bonding such as LCD LED Display Screen Fixation
Nameplates membrane switch permanent bonding
Metal parts permanent bonding
Splicing for Metal processing and paper making industry.

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	180°Peel strength (gf/25mm)	Short-term temperature (℃)	Long-term temperature (℃)

AHS-5413	0.13	Acrylic	No	Transparent	paper	≥2500	171	121

Acetate Cloth Tape

Introduction:
Acetate cloth tape uses imported acetate fiber as substrate and coated on rubber adhesive.

Features:
High temperature resistance ,corrosion resistance, ageing-resistance and high insulation printable and stable property.

Application:
Widely used on transformer layer insulation and strapping, wire, mobile phones, computers, electronics,etc.

Model	Thickness (mm)	Adhesive	Backing	Color	Adhesion to Steel (N/25mm)	Elongation at break (%)	Voltage resistance (KV)	Retardant	Short/Long-term temperature (°C)

Electrical Mylar Tape

Introduction:
Electrical Mylar tape uses PET film as substrate and coated with high performance adhesive.

Features:
Good electric properity,High voltage, moisture resistance ,flame resistance、 adhesion and flexibility, weather-resistance.

Application:
Widely apply on Electrical wire wrapping.
Connecting ,insulating , repair and cables reinforcing and protecting

Model	Thickness (mm)	Adhesive	Backing	Color	Peel Adhesion (N)	Elongation at break (%)	Electrolytic Corrosion	Tensile Strength (N)	Break-down Voltage (V)	Temperature Resistance (°C)

AHS-4208	0.08	Acrylic	PET Film	Various	≥300	≥80	≥0.98	≥21N	≥5.5V	130

Cloth Tape

Introduction:
Cloth Tape uses polyethylene and gauze fiber as a substrate coated on rubber adhesive.

Features:
Strong peel strength, tensile strength, ageing resistance, waterproof and anti-corrosion, It is a non-conductive and high viscosity adhesive tape.

Application:
Mainly used for carton sealing , then suture fight carpet, heavy strapping, waterproof packaging.

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	Adhesion to Steel (N/25mm)	Elongation at break (%)	Tensile Strength (N)	Short-term temperature (°C)	Long-term temperature (°C)

Crepe Paper Masking Tape

Introduction:

Masking tape uses crepe paper as substrate and coated with pressure sensitive adhesive.

Features:

Environment-friendly, with water-based glue, temperature resistance from (60℃- 300℃), good adhesive strength, chemical corrosion, excellent ability to maintain adhesive strength, no residue.

Application:

Widely used in interior decoration, household appliances, paint spraying and high-end luxury cars.

Model	Thickness (mm)	Adhesive	Backing	Color	Adhesion to Steel (N/25mm)	Holding power (Hr)	Tensile Strength (N)	Elongation at break (%)	Short-term temperature (℃)	Long-term temperature (℃)
AHS-3112L	0.12	Acrylic	textured paper	Light yellow	≥5	≥3	≥45	13%	80	50

Glass Fiber Tape

Introduction:

Glass fiber tape use PET and fiber composition as substrate, coated with high viscosity glue.

Features:

strong viscosity, strong tensile strength, easy peel off without leaving any adhesive residue, insulation and so on.

Application:

Mainly used for packaging heavy, strong bonding, electrical components fixed

Model	Thickness (mm)	Adhesive	Backing	Color	Liner	Tensile Strength (N)	Adhesion	Elongation at break (%)	Short-term temperature (%)	Long-term temperature (%)
AHS-3211	0.11	Rubber	PET+Glass fiber	White	No	400	8	5%	100	80
AHS-3215R	0.15	Rubber	PET+Glass fiber	White	No	400	8	5%	60	400
AHS-3215	0.15	Acrylic	PET+Glass fiber	White	No	400	8	5%	60	400
AHS-3216S	0.165	Acrylic	PET+Glass fiber	White	No	400	8	5%	60	400

PE Protective Film

Introduction:
PE protective film uses a special polyethylene (PE) plastic film as the substrate, coated with acrylic adhesive. According to the density can be divided into high-density , medium density and low density.

Features:
High puncture resistance and high transmitting. Good moisture proof. Different density polyethylene. Good ageing performance, eco-friendly. Easy to be laminated and peeled off.

Application:
Mainly used in metal industry, optical industry, plastic industry, printing industry, wire and cable industry. Used for glass, lenses, high-gloss plastic surfaces, acrylic and other surface protection.

Model	Thickness (mm)	Peel Adhesion (g/25mm)	Backing	Color	Liner	Short-term temperature (°C)	Long-term temperature (°C)	Main Features
AHS-6105	0.05	3-10	Polyethylene film	Transparent	No	60	50	Multi-adhesion
AHS-6109	0.09	15	Polyethylene film	Transparent	No	60	50	Multi-adhesion
AHS-6114	0.14	600	Polyethylene film	Transparent	No	120	80	Heat Resistance
AHS-6105ESD	0.05	3	Polyethylene film	Transparent	No	65	80	Anti-static
AHS-6105E	0.05	6	Polyethylene film	Transparent	No	65	80	Multi-Adhesion

PET Protective Film

Introduction:
PET protective film uses PET film as a substrate, then coated with acrylic/ silicone adhesive to be multi-adhesion and long-term fitting.

Features:
Good smooth surface, excellent weather resistance, high temperature protection, high transmitting and removed without adhesive residue.

Application:
Used to protect flat panel display panels (LCDs, OLEDs, EL, the PDP, the CRT, touch screens, mobile phones, digital cameras and PDA panel), to avoid scratches and protect the screen panel.

Model	Total Thickness (mm)	Backing	Light transmittance	Backing Thickness (mm)	Liner thickness (mm)	Adhesive	Peel force (g/25mm)	Temperature Resistance	Surface Resistance
AHS-62035	0.035	PET	>80%	0.025	/	Acrylic	5-300	160°C*1H	/

UV Dicing film

Introduction:

UV protective film use PO film or PET film as substrate, coated with acrylic adhesive combine with PET release film.

Features:

High transmittance, Strong initial tack , Loss adhesive after UV irradiation

Application:

Mainly applicate on cellphone ,LCD, IPAD for flat glass, glass cutting protection ,circuit board cutting protection, touch screen protection and optical material delivery .

Model	Total Thickness (mm)	Base Film Thickness (mm)	Base Film	Liner	Adhesive	Peel force (After UV)	Tensile Strength (N/10mm)	Elongation (%)	Surface Resistance

PU Protective film

Introduction:

PU Protective Film uses PET Film as substrate, coated with anti-static polyurethane glue adhesive combine with PET release film.

Features:

Good smooth surface, excellent weather resistance, high temperature protection, high transmitting and removed without adhesive residue.

Application:

Mainly apply on mobilephone ,LCD, IPAD for flat glass, TP back cover , touch screen protection and optical material delivery.

Model	Total Thickness (mm)	Backing	Backing Thickness (mm)	Liner thickness (mm)	Peel force g/25mm	Temperature Resistance	Film Surface Resistance	PU adhesive Surface Resistance
